Portfolio

Profile / Summary

Information Security and Governance, Risk and Compliance (GRC) Consultant specialising in ISO/IEC 27001:2022 Information Security Management System (ISMS) implementation, risk management and internal audit. Delivers end to end ISO/IEC 27001 and ISO/IEC 42001 (Artificial Intelligence Management System) programmes for SMEs, research organisations and defence supply chain clients, covering scoping, risk assessment and risk treatment, Statement of Applicability (SoA) and Annex A controls, control implementation, internal audit, and corrective and preventive action (CAPA).

PECB certified ISO/IEC 27001 Lead Auditor with a Diploma in Information Security. Experienced in gap analysis against ISO/IEC 27001, ISO 9001:2015 and NIST SP 800-171, third party risk management (TPRM) and supplier due diligence, UK GDPR and Data Protection Act 2018 compliance, and business continuity and disaster recovery (BC/DR) planning. Backed by nearly five years of commercial software engineering, enabling secure by design translation of governance requirements into controls engineering teams will actually adopt. Comfortable communicating risk to executive audiences while remaining credible with developers.

Key Skills

- | | |
|---|--|
| • ISO/IEC 27001:2022 ISMS Implementation & Certification Support | • Third Party Risk Management (TPRM) & Supplier Assurance |
| • Governance, Risk and Compliance (GRC) | • UK GDPR, Data Protection Act 2018 & Privacy |
| • Risk Assessment, Risk Treatment & Risk Registers | • Cyber Essentials & Cyber Essentials Plus Readiness |
| • Internal Audit, Nonconformity & Corrective and Preventive Action (CAPA) | • NIST SP 800-171 & CMMC Readiness |
| • Statement of Applicability (SoA) & Annex A Controls | • ISMS Policy Authoring, BC/DR & Secure Development |
| • Gap Analysis & Remediation Roadmaps | • ISO/IEC 42001 Artificial Intelligence Management Systems & AI Governance |
| | • Stakeholder Engagement & Executive Reporting |

Career History / Work Experience

ADL Consulting Ltd (UK) - Information Security Consultant

September 2025 - Present

- Deliver end to end ISO/IEC 27001:2022 ISMS implementation, certification readiness and maintenance programmes across seven concurrent client engagements spanning defence supply chain, Software as a Service (SaaS), research, nonprofit and professional services, each with its own regulatory drivers and certification deadlines.
- Plan and conduct internal audit programmes across multiple departments, producing audit plans, control matrices and schedules, and reporting nonconformities, corrective and preventive action (CAPA) and opportunities for improvement to senior management for tracking through to closure.
- Lead third party risk management (TPRM) and supplier due diligence, evaluating vendor certifications, data processing agreements (DPAs), data residency and UK GDPR processor obligations, and maintaining structured supplier risk registers as client ISMS evidence.
- Author full ISMS documentation suites including information security policies, business continuity and disaster recovery (BC/DR) plans and management review inputs supporting continual improvement
- Perform gap analysis and produce prioritised remediation roadmaps against ISO 9001:2015, ISO/IEC 42001, NIST SP 800-171, Cyber Essentials and Cyber Essentials Plus
- Bridge engineering and compliance by testing whether proposed controls are technically viable before they reach a Statement of Applicability, then translating the resulting risk into plain language for client directors and holding that position under challenge.

Re:Healthify (UK)- Full Stack Developer(concurrent short engagement)

July 2025 - August 2025

- Designed and deployed an artificial intelligence health platform from core architecture through to production, implementing controls aligned to healthcare data protection and privacy requirements.
- Integrated electronic health record (EHR) data flows with data minimisation and access control designed from the outset rather than retrofitted.

Lumel (Remote)- Full Stack Developer(concurrent)

April 2025 - September 2025

- Delivered high performance React and TypeScript applications for an enterprise analytics product serving a large scale user base, working across Next.js and Node.js.
- Applied secure development principles including input validation, authentication flow design and dependency management within the delivery lifecycle.

Freelance (UK) - Web Developer

September 2023 - July 2025

- Delivered full stack web applications for international clients from design through development, testing and production release using React and Node.js, managing scoping, delivery timelines and handover documentation independently.

Lumel - Product Developer

January 2022 - September 2023

- Engineered complex frontend features in React.js and TypeScript, improving measured user satisfaction by 45% through enhanced functionality and usability.
- Led three concurrent projects under Agile methodology, achieving a 95% on time delivery rate and a 20% improvement in team efficiency.
- Built reusable component libraries reducing development time on new projects by 25%, and presented technical briefings to the wider engineering team to accelerate adoption.

Flyers Soft- Frontend Developer

January 2021 - January 2022

- Built and maintained responsive React.js frontend features for client web applications, working directly with clients from requirements through to production release and presenting delivered work in Agile sprint reviews.

Projects

ISMS Risk and Control Assurance Across a Seven Client Portfolio

Own the risk assessment, control mapping and internal audit workstreams for seven concurrent clients across defence supply chain, SaaS, research, non-profit and professional services, building risk registers, mapping Statement of Applicability controls to live risk entries and tracking remediation to closure. On the largest engagement, mapped 85 Statement of Applicability included controls across 76 live risk entries with a programmatic validation gate so only approved controls could be linked, then integrated internal audit findings against the affected risk rows to give the certification body a single traceable evidence chain.

NIST SP 800-171 Gap Analysis for a Defence Supply Chain Manufacturer

Reviewed 110 controls against an existing System Security Plan and a subsequent ISO/IEC 27001 internal audit, categorising each control by implementation status and evidencing the delta. Produced a prioritised remediation roadmap supporting the client route to Cybersecurity Maturity Model Certification (CMMC) readiness.

Multi Department Internal Audit Programme, Software Client

Planned and led a full ISO/IEC 27001:2022 internal audit programme across eight departments, producing the audit plan, control matrix and schedule, conducting the audits and reporting nonconformities and opportunities for improvement to senior management for corrective action tracking

Simple Supplier Management (SSM)

Designed and contributed to crucial features of the application centralising supplier records, certifications, renewal dates and risk ratings, replacing spreadsheet based registers. Combines ISO/IEC 27001 supplier controls A.5.19 to A.5.22 with practical engineering delivery. Currently being used by one of the top 10 financial sector companies in the UK and more. Lead Townhall meetings and managed secure code practices like input validation, output encoding, parameterised queries, secrets management, least privilege access control and dependency vulnerability scanning, aligned to the OWASP Top 10.

Education / Qualifications

Certified GRC Engineer - Auditor Specialty (CGE-AUD)	Aug 2026
ISO/IEC 42001 AI Management Systems Masterclass	Aug 2026
ISO 9001:2015 Quality Management Systems	July 2026
Building an ISO 27001-Compliant Cybersecurity Program	Dec 2024
Architectural Thinking for Security	Dec 2023
PECB - ISO/IEC 27001 Lead Auditor	Sep 2023
Mastercard - Cybersecurity Job Simulation	Sep 2023
Diploma in Information Security, University of Surrey	September 2023- September 2024
BTech Information Technology, BSA Crescent Institute of Science & Technology	2015- 2019
